Screen Reader : Supported
Enhanced typesetting : Enabled
Print length : 240 pages

The issue begins with an overview of the current state of molecular targets in neurosurgery. This is followed by a series of articles on specific molecular targets, including:

- EGFR
- VEGF
- PDGF
- mTOR

- PI3K

Each article provides a comprehensive overview of the biology of the target, its role in neurological diseases, and the current status of clinical trials targeting the target.

The issue also includes a section on clinical trial design and methodology. This section provides guidance on how to design and conduct clinical trials for neurological diseases.

Molecular Targets and Clinical Trials is an essential resource for neurosurgeons, neurologists, and other healthcare professionals who are involved in the treatment of neurological diseases. This issue provides the latest information on molecular targets and clinical trials, and it will help readers to stay up-to-date on the latest advances in this field.

Featured Articles

The following articles are featured in this issue:

- EGFR: A Molecular Target for Glioma Therapy
- VEGF: A Molecular Target for Angiogenesis Inhibition
- PDGF: A Molecular Target for Glioma Invasion
- mTOR: A Molecular Target for Neurodegenerative Diseases
- PI3K: A Molecular Target for Stroke

About Neurosurgery Clinics of North America

Neurosurgery Clinics of North America is a quarterly journal that publishes review articles on the latest advances in neurosurgery. The journal is edited by internationally renowned neurosurgeons, and it features contributions from leading experts in the field.

Neurosurgery Clinics of North America is a valuable resource for neurosurgeons, neurologists, and other healthcare professionals who are involved in the treatment of neurological diseases. The journal provides the latest information on new surgical techniques, diagnostic procedures, and treatment options.
