The Life and Work of Ted Nash

Ted Nash was born in New York City in 1942. He began playing the saxophone at a young age, and by the time he was a teenager, he was already performing professionally. In the early 1960s, Nash began to experiment with high harmonics, and he quickly realized that he had discovered a new world of sound. He continued to develop his techniques throughout the 1970s and 1980s, and in 1992, he published his seminal work, *Studies in High Harmonics*.

Studies in High Harmonics is a comprehensive guide to Nash's techniques for playing high harmonics. The book includes exercises, etudes, and compositions that explore the full range of possibilities that high harmonics

offer. Nash's work has been praised by musicians and critics alike, and it has been used by countless musicians to expand their musical horizons.

Nash's Techniques for Playing High Harmonics

Nash's techniques for playing high harmonics are based on a simple principle: by overblowing the saxophone, it is possible to produce harmonics that are much higher than the fundamental pitch of the instrument. Nash developed a number of different ways to overblow the saxophone, and he was able to produce harmonics that were several octaves above the fundamental. He also developed techniques for controlling the timbre and intonation of these harmonics, and he was able to create a wide range of new and unusual sounds.

One of Nash's most famous techniques is called "circular breathing." Circular breathing is a technique that allows a musician to play continuously without taking a breath. This is achieved by inhaling through the nose while exhaling through the mouth. Nash developed a special mouthpiece that allows him to circular breathe on the saxophone, and he used this technique to create long, flowing lines of high harmonics.
